August 2021

FOREWORD

Dear Prognosfruit participant,

WAPA, the World Apple and Pear Association, is pleased to provide in this report the 2021 European apple and pear crop estimate. These data have been released during the Prognosfruit 2021 Online Conference, which took place on 5 August 2021.

This report is compiled upon the initiative of the apple and pear working group of COPA-COGECA. The data have been collected with the useful support of the respective representative national producer organisations of the various Member States of the European Union and beyond.

In 2021, the apple production in the EU for the 21 top producing countries contributing to this report is estimated to increase by 10% to 11.735,000 T. This year's crop is also estimated to be 1% above than the average of 2018-2019-2020. Regarding the main varieties, Golden Delicious increased by 8% to 2.120.000 T, although this still represents a 4% decrease compared to the 3-year average. Gala, the second largest varieties increased by 8% compared to both 2020 and the 3-year average. Idared increased by 9% to 685.000 T, while Red Delicious decreased by 3% to 640.000T. The European apples crop continue its diversification to new varieties.

The EU pear crop for 2021 is estimated to decrease by 28% compared to last year and 27% compared to the 3-year average, falling to 1.604.000 T, the lowest in the last decade. This drop is due to the major decreases in Belgium (-25%), France (-57%), and Italy (-65%) . As a result, in 2021, the production of Conference is estimated to decrease by 18% to 805.000 T, while William BC is projected to half its production to 127.000 T. Rocha is the only variety set to increase its production in 2021 (+36%). Importantly, Abate is falling by 73% to 66.000 T.

This report also provides information regarding the stock trends of the last season.

Besides the information provided by the representative organisations, this report is further completed with additional data of last years' production in the other EU Member States, as well as in several relevant countries outside the border of the European Union, including the forecasted data for the EU neighbouring countries, China, Mexico, and the USA. The Southern Hemisphere crop forecasts as initially released by WAPA (February 2021) are also presented in a summary format.

Important comments on the report:

- All crop data presented in this report are in metric tonnes (MT).

- Data are rounded to the nearest '000T. Rounding could influence % of variation, in particular in case of low production levels.

- Data are collected by the representative producer organisations of the respective countries.

- Data usually reflect the commercial volume of production and therefore does not include own garden production.

- When there is no reporting organisation, data included in this report relates to the information collected from FAOSTAT and EUROSTAT databases. This information is added to extend the scope of the report and to give a more comprehensive overview of the situation.

- Concerning the USA, the official apple data will be made available during the US Apple Crop Outlook Conference on 19-20 August 2021. The data as included in this report are therefore provisional and could be subject to change. For apples, the breakdown by variety is not yet available with the Premier USDA announcements and therefore the variety breakdown was extrapolated from the share breakdown of the previous year.

- The report is compiled with the intention of being presented at the Annual Prognosfruit conference. The data are provided by each country's representative apple and pear organisation(s). Since it refers to commercial data, the data can be different from official national statistics. Moreover, the data presented in this report will be subject to change depending on evolving weather conditions, due to picking and packing and/or general crop and market developments.

- WAPA compiles the data professionally to be presented to the industry at the Prognosfruit conference with the greatest level of accuracy, and with total neutrality, integrity and independence. WAPA cannot be held liable for any misuse of the data nor held responsible for any interpretations by individual operators or by the market as a whole of the impact of the crop estimates. There are many different factors that could impact the evolution of the market throughout a season.

- This report is presented with an industry commitment to transparency.

Harvista™
an AgroFresh solution

Be confident in your pome fruit harvest.

Harvista™ helps put a superior season within reach.

With Harvista™ 1.3 SC, you can slow the natural ripening process, giving apples and pears more time on the tree to secure size and help overall fruit quality.

Emergency permit authorized for 120 days in Hungary, Poland, Portugal and Serbia

AgroFresh
We Grow Confidence™

Achieve *Smarter Freshness* with our portfolio of AgTech solutions

SmartFresh™ Quality System
Maintains fruit quality post-harvest during storage, transport and ripening

VitaFresh™ Botanicals
Plant-based, edible coatings for fresh produce protection, shelf life extension and food loss/waste reduction

TEYCER™ Originals
Traditional, edible coatings, including with fungal protection

ActiSeal™
Protect your pome fruit against post-harvest diseases

Control-Tec™
Complete technologies product portfolio for the specialized needs of packinghouses, storage rooms and researchers

AgroFresh
We Grow Confidence™
