Welcome to Prognosfruit 2026!

Welcome to the 2026 edition of Prognosfruit,
hosted in Constance, Germany.

Prognosfruit is built on a long experience of gathering the European apple and pear industry.

Prognosfruit welcomes growers, processors, and traders from across Europe and beyond every year, and offers a networking opportunity for decision makers attending the conference, the technical visits, and several social events to reinforce the networking and contacts amongst the European apple and pear community.

The previous editions of Prognosfruit took place in:

- Bavendorf, DE (1976)
 - Ravensburg, DE (1977)

Foreward

Dear Prognosfruit participant,

WAPA, the World Apple and Pear Association, is pleased to provide in this report the 2026 European apple and pear crop estimates. These data have been released during the Prognosfruit 2026, which took place on 5-7 August 2026 in Constance, Germany.

Upon a historic initiative of the apple and pear working group of COPA-COGECA, the apples and pears forecast has been compiled every year for the past 50 years. The data are collected by WAPA with the useful support of the respective representative national producer organisations of the various Member States of the European Union and beyond.

In 2026, the apple production in the EU for the top producing countries contributing to this report is estimated to decrease by 15.6% to a total of 9,496,047 t. This year's crop is also 14.3% below the average of the previous 3 years. Regarding the main varieties, Golden Delicious production is set to shrink by 11.1% to a total of 1,809,982 t. Gala, the second-largest variety, is also expected to decrease by 8.9% to 1,362,797 t, along with Red Delicious (-5.3% to 496,522 t) and Idared (415,559 t, -19.7%).

On the other hand, the EU pear crop for 2026 is estimated to grow by 5.5% compared to last year, with a total of 1,946,482 t. The total volume is also 9.9% above the 3-year average. Italy's production is expected to increase by 17.4% to 347,325, while the Dutch estimates are 9.6% higher than last season's. Belgium's pear forecast, on the contrary, is 7.2% below the 2025/2026 season. In 2026, the production of Conference pears is estimated to reach 905,693 t (+2.1%). William BC pear production should also increase by 1.1% to 211,606 t.

This report also provides information regarding the stock trends of the last season.

Besides the information provided by the representative organisations, this report is further completed with additional data on last year's production in the other EU Member States, as well as in several relevant countries outside the border of the European Union, including the forecasted data for the EU neighbouring countries, China, Mexico, and the USA, providing a very representative overview for the Northern Hemisphere pipfruit production. The Southern Hemisphere crop forecasts as initially released by WAPA (February 2026) are also presented in a summary format.

Foreward

This report has been compiled by [Gil Kaufman](#). On behalf of the European and international pipfruit sector, I thank him for his dedicated work, precision, tenancy, and timely delivery. Many thanks for a great report, Gil!

Some key points about the report:

- All crop data presented in this report are in metric tons (t)
- Data are rounded to the nearest '000 t. Rounding could influence the % of the variation, in particular in case of low production levels
- Data are collected by the representative producer organisations of the respective countries
- Data usually reflect the commercial production volume and therefore do not include own garden production
- When there is no reporting organisation, data included in this report relates to the information collected from FAOSTAT and EUROSTAT databases. This information is added to extend the scope of the report and to give a more comprehensive overview of the situation
- Concerning the USA, the official apple data will be made available during the US Apple Crop Outlook Conference in August 2026. The figures reported in this report, presented by State, are therefore provisional and could be subject to change
- The report is compiled with the intention of being presented at the annual Prognosfruit Conference. The data are provided by each country's representative apple and pear organisation(s). Since it refers to commercial data, it may differ from official national statistics. Moreover, the data presented in this report will be subject to change depending on evolving weather conditions, due to picking and packing and/or general crop and market developments
- The category "Other new varieties" includes:
 - Apples: Ambrosia, Ariane, Belgica, Bonita, Cameo, Cosmic Crisp, Crimson Snow, Cripps Red/Joya, Dalicclass, Diwa, Goodness Me, Greenstar, Honey Crunch, Jazz, Juliet, Junami, Kanzi, Kiku, Kizuri, Magic Star/Natyra, Mariac, Opal, Regal You, RoHo 3615/Evelina, Rubens, Rubis Gold, Scilate/Envy, Story, Sunspark, Tentation, Wellant
 - Pears: Angys, Beurré Alexander Lucas, Celina/Qtee, Cepuna/Migo, CH201/Fred, Corina, Early Desire, Fred, Harrow Sweet, Migo, Piqa Red, Qtee, Red Modoc, Sweet Sensation, Sweet Sensation, Xenia
- WAPA compiles the data professionally to be presented to the industry at the Prognosfruit conference with the greatest level of accuracy, and with total neutrality, integrity and independence. WAPA cannot be held liable for any misuse of the data nor held responsible for any interpretations by individual operators or by the market as a whole of the impact of the crop estimates. There are many different factors that could impact the evolution of the market throughout a season
- This report is presented with an industry commitment to transparency.

European apple sales - major countries (1.000 t)							

HARVISTA™ HELPS PUT A SUPERIOR SEASON WITHIN REACH.

With **Harvista™ 1.3 SC**, you can slow the natural ripening process, giving apples and pears more time on the tree to help secure size, color and overall fruit quality.

- Higher firmness and starch retention support maximum quality and flexibility
- Allows for a longer color development window, for increased profit potential
- Helps fruit adapt to stress conditions such as inclement weather
- Allows more flexible labor management

Harvista™

SEE THE DIFFERENCE WHERE IT MATTERS.

Our integrated digital platform, **FreshCloud™ Inspection**, helps you drive accuracy and consistency across your operation with streamlined quality inspections and intelligent end-to-end data visibility. Put real-time data to work for you, to minimize food waste and maximize quality and profitability.

FRESHCLOUD™
Powered by AgroFresh

Empower stakeholders
across your organization

Achieve traceability with
end-to-end data visibility

Easily access
real-time reports

Help minimize
produce rejects

THE JOURNEY OF FRESH PRODUCE POWERED BY AGROFRESH

Farming is evolving — so are the challenges. From labor shortages to unpredictable logistics, we get what you're up against. That's why AgroFresh delivers smarter, tech-enabled freshness solutions that keep your produce at peak quality, every step of the way.

We help you reduce waste, save time and build resilience in your supply chain — so you can grow profitably and sustainably.

Science. Solutions. Sustainability.

Scan the code to explore how
we're helping growers, packers
and distributors succeed.

AgroFresh
